OrionNET™ v2.0 Enhancements

OrionNET v2.0 incorporates the following major features:

1) **OrionNET Reports:**

- a) **Merge databases from the same job:** *used when one job is recorded in several separate databases due to Acquisition restart during the job.*
- b) **Filter data:** *allows data-display management/summarization; for example, view data only from a channel that is changed by a user-defined amount.*
- c) **Save chart layouts to the local computer instead of to the database:** *allows office locations to define chart setup, providing consistent reports for the customer.*

2) **OrionNET View Designer:**

- a) **Set a password** to protect the View Designer layout.
- b) **Align or size controls** with respect to each other.
- c) **Receive notification if any control is hidden behind another:** *allows deletion of unneeded controls to help prevent unnecessary use of resources.*

3) **OrionNET Viewer and other General Enhancements:**

- a) **Select a database-naming template** that that is automatically used when OrionNET starts recording; for example, the database name can now include the Job name.
 - b) **Select desired configuration** each time Acquisition starts: *useful for technicians who work on multiple hardware systems.*
 - c) **Place a clock or user-controlled timer** on any customized Viewer screen.
 - d) **View alarm and warning notations in the data log:** *allows a user to quickly identify alarm occurrences during a job. NOTE: Alarms/warnings are viewable and printable in OrionNET Reports.*
 - e) **Set alarms to provide audible indicators:** *allows users to hear alarms through computer speakers.*
 - f) **Prevent accidental corruption of a sensor's calibration:** *the user may not set a sensor value if the associated sensor is disconnected.*
 - g) **Use the diagnostics display to help identify and resolve any issues** with Orion IV, ASCII via Serial, and Derived Channel data sources.
 - h) **Password-protect the Configuration utility:** *prevent unauthorized personnel from modifying the configurations, making the configuration utility read-only.*
-
